Water Rates in Delaware and Surrounding States

Draft December 2017

Introduction

The University of Delaware Water Resources Center (DWRC) conducted a survey of water rates for public and investor-owned water utilities within Delaware and surrounding states of Pennsylvania, New Jersey, and Maryland. This 2017 survey is an update of previous reports prepared in 2000, 2004, 2008, 2011, 2012, 2013, and 2015.

Note that the costs and rates charged for water services differ in many respects between public and investor-owned purveyors. For example, public purveyors have sources of capital and revenue that are assumed by the tax payers but are not reflected in the water rates. For such public purveyors, finances can be intermingled with other municipal departments, thus revenues and costs are shared with other city functions. Investor-owned purveyors, unlike public purveyors, can charge rates to cover operating costs and earn profit. Additionally, expenses paid by investor-owned purveyors, primarily taxes, are not paid by the public purveyor. It is important to consider this information related to water service and rates charged for water service (which often varies by state) when comparing public- and investor-owned purveyors. Additional information on this topic can be found by reading the EPA “Four Pillars Approach – Rates that Reflect the Full Cost of Services” at <http://www.epa.gov/waterinfrastructure/>.

Methods

The DWRC contacted water utilities by e-mail, telephone, or website and collected water rate and tariff data from over 50 water purveyors in the four states. We used these assumptions to compute residential water rates: (a) quarterly residential water use equal to 15,000 gallons per customer (5,000 gallons per month) and (b) the average residential water meter is 5/8 inch or 3/4-inch diameter.

The following formula was used to calculate the average residential water rate per quarter:

$$AQC = SC + FP + X(QCR) + QU + DC$$

Where:

- AQC = Average Quarterly Charge (\$/quarter)
- SC = Service Charge (\$/quarter)
- FP = Fire Protection Fee (\$/quarter)
- X = Quarterly Residential Water Use (15,000 gallons/quarter)
- QCR = Quarterly Consumption Rate (\$/1,000 gallons)
- QU = Quarterly Use Fee (\$/quarter)
- DC = Distribution Improvement Charge (\$/quarter)

Assuming the average residential unit uses an average of 15,000 gallons per quarter, AQC (\$/quarter) is divided by 15 and this value is equal to the quarterly rate per 1,000 gallons. Two additional conversions are important for analysis. If the water purveyor charges monthly fees rather than quarterly fees, the water rates are converted to quarterly rates by multiplying the monthly rate by three.

If the water purveyor charges fees based on cubic feet rather than gallons, the rates are converted given that 1 cubic foot = 7.48 gallons. See the following sample calculation of residential water rates.

Given:

- AQC = Average Quarterly Charge = \$X/quarter
- SC = Service Charge = \$20.00/quarter
- FP = Fire Protection Fee = \$5.00/quarter
- X = 15,000 gallons used quarterly
- QCR = Quarterly Consumption Rate = \$2.00/1,000 gallons
- QU = Quarterly Use Fee = \$0.00/quarter
- DC = Distribution Charge = \$0.00/quarter

Therefore:

$$\text{AQC} = \$20.00 + \$5.00 + 15,000(\$2.00/1,000 \text{ gal}) + \$0.00 + \$0.00 = \$55.00/\text{quarter}$$

$$\text{Average Quarterly Rate} = \text{AQC}/15 = \$55.00/15 = \$3.67/1,000 \text{ gal}$$

Summary

The water rate survey includes public and investor-owned utilities in Delaware and surrounding states of Pennsylvania, New Jersey, and Maryland. For all water purveyors surveyed, the 2017 mean water rate is \$6.94/1,000 gallons and rates range from \$1.73/1000 gallons to \$14.21/1000 gallons (Table 1). The mean water rate ranges from \$6.51/1,000 gallons for public water purveyors to \$12.29 for investor-owned water purveyors. Tables 2 through 7 summarize water rates for water purveyors in Delaware, Maryland, New Jersey, and Pennsylvania.

Table 1. Mean residential water rates (2000-2017)

Purveyor Category	2000 Mean (\$/1,000 gal)	2004 Mean (\$/1,000 gal)	2008 Mean (\$/1,000 gal)	2011 Mean (\$/1,000 gal)	2015 Mean (\$/1,000 gal)	2017 Mean (\$/1,000 gal)
Public	2.97	3.32	4.44	5.34	6.13	6.51
