Water Rates in Delaware and Surrounding States

Final Draft September 2011

Introduction

The Water Resources Agency at the University of Delaware Institute for Public Administration conducted an inventory of water rates for public- and investor-owned water utilities within Delaware and the surrounding states of Pennsylvania, New Jersey, and Maryland. This 2011 survey is an update of previous reports prepared in 2000, 2004, and 2008.

Note that the costs and rates charged for water services differ in many respects between public and investor-owned purveyors. For example, public purveyors have tax payer sources of capital and revenue that are assumed by the tax payers but are not reflected in the water rates. For such public purveyors, finances can be intermingled with other municipal departments, thus revenues and costs are shared with other municipal functions. Investor-owned purveyors, unlike public purveyors, can charge rates to cover operating costs and reap a potential profit. Additionally, expenses paid by investor-owned purveyors, primarily taxes, are not paid by the public purveyor. It is important to consider this information related to water service and rates charged for water service (which often varies by state) when comparing public and investor-owned purveyors. Additional information on this topic can be found by reading the EPA *Four Pillars Approach – Rates that Reflect the Full Cost of Services* at <http://www.epa.gov/waterinfrastructure/>.

Methods

We contacted the water utilities by e-mail, telephone, or website and collected water rate and tariff data from over 50 water purveyors in the four states.

We used the following assumptions to compute residential water rates:

- Quarterly residential water use equal to 15,000 gallons per customer.
- The average residential water meter is 5/8 inch or 3/4 inch diameter.

The following formula was used to calculate the average residential water rate per quarter:

$$\text{AQC} = \text{SC} + \text{FP} + \text{X}(\text{QCR}) + \text{QU} + \text{DC}$$

Where:

- AQC = Average Quarterly Charge (\$/quarter)
- SC = Service Charge (\$/quarter)
- FP = Fire Protection Fee (\$/quarter)
- X = Quarterly Residential Water Use (15,000 gallons/quarter)
- QCR = Quarterly Consumption Rate (\$/1,000 gallons)
- QU = Quarterly Use Fee (\$/quarter)
- DC = Distribution Charge (\$/quarter)

Assuming the average residential unit uses an average of 15,000 gallons per quarter, AQC (\$/quarter) is divided by 15 and this value is equal to the quarterly rate per 1,000 gallons. Two additional

conversions are important for analysis. If the water purveyor charges monthly fees rather than quarterly fees, the water rates must be converted to quarterly rates by multiplying the monthly rate by 3. If the water purveyor charges fees based on cubic feet rather than gallons, the rates must be converted given that 1 cubic foot = 7.48 gallons.

See the sample calculation of residential water rates for hypothetical Town of White Clay.

Given:

- AQC = Average Quarterly Charge = \$X/quarter
- SC = Service Charge = \$20.00/quarter
- FP = Fire Protection Fee = \$5.00/quarter
- X = 15,000 gallons used quarterly
- QCR = Quarterly Consumption Rate = \$2.00/1,000 gallons
- QU = Quarterly Use Fee = \$0.00/quarter
- DC = Distribution Charge = \$0.00/quarter

Therefore:

$$\text{AQC} = \$20.00 + \$5.00 + 15,000(\$2.00/1,000 \text{ gal}) + \$0.00 + \$0.00 = \$55.00/\text{quarter}$$

$$\text{Average Quarterly Rate} = \text{AQC}/15 = \$55.00/15 = \$3.67/1,000 \text{ gal}$$

Summary

The 2011 water rate survey includes public- and investor-owned utilities in Delaware and surrounding states of Pennsylvania, New Jersey, and Maryland. The 2011 data set includes 48 public- and 6 investor-owned water purveyors. For the 54 water purveyors, the mean water rate is \$5.69/1,000 gallons and the rates range from \$1.73/1000 gallons to \$11.14/1000 gallons (Table 1). Tables 2 through 7 summarize water rates for the water purveyors in Delaware, Maryland, New Jersey, and Pennsylvania in 2000, 2004, 2008, and 2011.

Table 1. Residential Water Rate Summary, 2000, 2004, 2008, and 2011

Purveyor Category	2000 Mean (\$/1,000 gal.)	2004 Mean (\$/1,000 gal.)	2008 Mean (\$/1,000 gal.)	2011 Mean (\$/1,000 gal.)
Public	2.97	3.32	4.44	5.34
Investor	4.85	6.24	6.46	9.02
All	3.29	3.70	4.78	5.69

Assumes quarterly residential water use of 15,000 gallons per customer
