

The Universities Council on Water Resources presents:

Hydropolitics: Challenges in Intergovernmental River Basin Management

Watersheds know no political boundaries. Rivers that cross state lines are often managed by a multitude of Federal, state, and local governments. River basin governance can be complex due to conflicts between the jurisdictions that share a common watershed (i.e. hydropolitics). Learn and discuss the history of watershed management in the U.S. and internationally; review policies and organizations created to manage waterways that cross political boundaries.
